(Second Page)

Abstract

(Third Page) - (not less than 150 words and not more than 200 words)

1. Introduction:(Start in new page)

Briefly introduce the Java Full Stack Project, its objectives, and its significance in the context of full-stack development.

2. Problem Statement:(Start in new page)

Describe the problem domain or business scenario that your Java Full Stack Project aims to address. Clearly define the challenges and opportunities that your project seeks to tackle.

3. User Stories:(Start in new page)

****User Story 1:****

- ****As a**** [user role],
- ****I want to**** [perform an action],
- ****So that**** [achieve a specific goal].

[Provide detailed descriptions of user stories, including acceptance criteria and any dependencies.]

****User Story 2:****

- ****As a**** [user role],
- ****I want to**** [perform an action],
- ****So that**** [achieve a specific goal].

[Continue with additional user stories as necessary.]

4. Flow Chart:(Start in new page)

After understanding the user stories, the flowchart is presented. Flowcharts illustrate the flow of processes or logic within the system. They provide a visual representation of how the system will work based on the user stories.

5. Technology Stack:(Start in new page)

Outline the technologies and frameworks you plan to use for the front end, back end, and database layers of your Java Full Stack Project.

6. Project Structure:(Start in new page)

Describe the overall architecture and structure of your Java Full Stack Project, including the organization of files, directories, and modules.

7. Development Environment:(Start in new page)

Detail the development environment setup required to work on the Java Full Stack Project, including IDEs, version control systems, and database management tools.

8. Project Management:(Start in new page)

Use JIRA and add a write up

Provide a timeline outlining the planned milestones and deliverables for the Java Full Stack Project, including deadlines for each phase of development.

9. Conclusion:(Start in new page)

Summarize the key points discussed in the report and emphasize the importance of the Java Full Stack Project as a learning opportunity in full-stack development.

10. Appendix:(Start in new page)

Screenshots: The screenshots can be included to provide visual representations of different aspects of the application. This can include screenshots of the user interface, key functionalities, different screens or pages within the application, etc. Make sure to label each screenshot appropriately to indicate what it is depicting.

Login Credentials: Including login credentials in the appendix can be helpful for stakeholders who want to access and test the application. This typically includes usernames and passwords for different roles or access levels within the application (e.g., admin, user). Make sure to clearly label which credentials are for which roles.
